Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

- Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
- The solution should address the core problem statement and implement the key functional requirements.
- Include all source files, configuration files, and setup instructions needed to run the application.
- Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/harshvardhan4418-crypto/personalized-travel-itinerary-planner (branch: main, latest commit a7febfa)
Programming Language(s)	JavaScript (JSX), Python, CSS
Framework(s) Used	React + Vite, FastAPI (Uvicorn), Leaflet, jsPDF, Supabase
Key Features Implemented	Supabase sign-in/sign-up UI, trips dashboard (search, sort, view, edit, delete), Create/Edit Trip forms, AI itinerary generation architecture with Groq, itinerary viewer, interactive map with Google Maps links, budget tracker, PDF export, responsive redesign (Phases 1-7).
Pending / Incomplete Features	Live production verification of login, trip save/edit/delete, Groq itinerary generation and PDF download; Supabase RLS review; README and test files.
Setup / Run Instructions	**Backend:** open the backend folder, create and activate a Python virtual environment, run `pip install -r requirements.txt`, create a `.env` file with SUPABASE_URL, SUPABASE_ANON_KEY, GROQ_API_KEY and FRONTEND_URL, then start with `uvicorn app.main:app --host 0.0.0.0 --port $PORT` (add --reload for local development). **Frontend:** open the frontend folder, run `npm install`, copy `.env.example` to `.env` and set VITE_SUPABASE_URL, VITE_SUPABASE_ANON_KEY and VITE_API_URL, then run `npm run dev`.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Partial
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Partial (build succeeds; live checks pending)
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The frontend redesign was committed as `a7febfa` ("feat: redesign TravelMate frontend UI") and pushed to the main branch. The production build completed successfully and no horizontal overflow was found at a 375px viewport in automated checks. Private keys such as GROQ_API_KEY are kept only in backend environment variables.
