Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	No (to be added)
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	No (Supabase schema to be exported)
5	Environment configuration file (.env.example or similar)	Yes (frontend)
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	No (pending)
10	Demo video or walkthrough (if required)	No (pending)

Step 2: File / Folder Structure

```
travel-itinerary-planner/
|-- frontend/
|   |-- index.html
|   |-- package.json
|   |-- vite.config.js
|   |-- .env.example
|   `-- src/
|       |-- App.jsx, App.css, index.css
|       |-- components/
|       |   |-- AuthModal.jsx
|       |   |-- CreateTrip.jsx
|       |   |-- EditTripModal.jsx
|       |   |-- ItineraryModal.jsx
|       |   `-- DayMap.jsx
|       `-- services/
|           |-- supabase.js
|           `-- pdfExport.js
|-- backend/
|   |-- requirements.txt
|   `-- app/
|       |-- main.py, database.py
|       |-- routes/      (itineraries.py, trips.py)
|       |-- schemas/     (itinerary.py)
|       `-- services/    (groq_service.py)
`-- .gitignore
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://personalized-travel-itinerary-planner-4f55ulcf3.vercel.app Backend: https://personalized-travel-itinerary-planner-k0ey.onrender.com
Login Credentials (Demo)	[Create a demo account and provide the demo username and password here]
Platform / Hosting Provider	Vercel (frontend), Render (backend), Supabase (database and authentication)
Repository Link	https://github.com/harshvardhan4418-crypto/personalized-travel-itinerary-planner
Demo Video Link	[Add demo video link]

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Clone the repository from GitHub and open the project folder.
2. Backend: go to `backend`, create a virtual environment, activate it and run `pip install -r requirements.txt`.
3. Create `backend/.env` with SUPABASE_URL, SUPABASE_ANON_KEY, GROQ_API_KEY and FRONTEND_URL.
4. Start the backend with `uvicorn app.main:app --reload` and check that /health returns {"status":"ok"}.
5. Frontend: go to `frontend`, run `npm install` and copy `.env.example` to `.env`.

6. Set VITE_SUPABASE_URL, VITE_SUPABASE_ANON_KEY and VITE_API_URL (the backend base URL).
7. Run `npm run dev` and open the local URL shown in the terminal.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Live login, trip save, Groq itinerary generation and PDF download are not yet verified in production.	Pending end-to-end production check.
2	An earlier deployment showed the error "supabaseUrl is required" because frontend environment variables were missing.	Set the VITE_ variables in Vercel and redeploy; re-verify.
3	AI itineraries may contain inaccurate opening hours, travel times or prices.	Treat costs as estimates; regenerate if needed.
4	Map pins can be missing when Nominatim cannot find a place name.	Fallback handling is implemented; use Google Maps links.
